

Recombinant Human GROß / CXCL2 (GRO beta)

Catalog Number: 100-123
Accession Number: P19875

Specifications and Uses:

Alternate Names: MGSAβ, CXCL2, MIP-2α, GRO2

Description:

Three human MGSA/GRO genes encode 3 highly related chemokines, MGSA/GRO α , - β and - γ . All 3 MGSA/GRO proteins bind to the same receptors, but with differing affinities, and stimulate a number of biological responses including chemotaxis, angiogenesis, and growth regulation. Recombinant human GRO β is a non-glycosylated protein, containing 73 amino acids, with a molecular weight of 7.9 kDa.

Source: E.coli

Physical Appearance: Sterile filtered white lyophilized (freeze-dried) powder.

Formulation and Stability:

Recombinant human GROβ is lyophilized with no additives.

Lyophilized product is very stable at -20°C. Reconstituted material should be aliquoted and frozen at -20°C. It is recommended that a carrier protein (0.1% HSA or BSA) is added for long term storage.

Reconstitution:

Centrifuge vial before opening. When reconstituting the product, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution. It is recommended to reconstitute the lyophilized product with sterile water at a concentration of 0.1 mg/mL, which can be further diluted into other aqueous solutions.

Protein Content and Purity (typically \geq 98%) determined by:

Reducing and Non-reducing SDS-PAGE, HPLC

Endotoxin Level:

Measured by kinetic LAL analysis and is typically $\leq 1 \text{ EU/}\mu\text{g}$ protein.

Biological Activity:

The activity is determined by the ability to chemoattract human neutrophils at concentrations between 10-100 ng/mL.

AA Sequence:
