Certificate of Analysis and Data Sheet

Rabbit anti-Human Cardiotrophin-1 antibody

Catalog No:
130-10013

Isotype:
Rabbit Ig G

Species:
Human

Accession No:
Q16619

Description

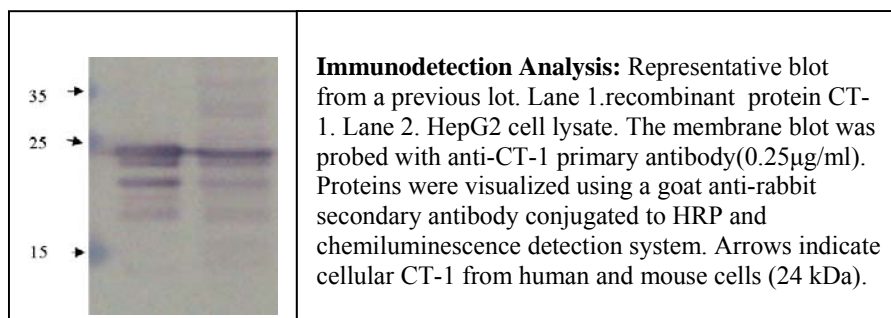

Cardiotrophin-1 (CT-1) is a cardiac hypertrophic factor and belongs to the IL-6 cytokine family. The protein interacts with the glycoprotein 130 (gp130)/leukemia inhibitory factor receptor beta (LIFR) heterodimer. CT-1 deficiency causes increased motoneuron cell death in spinal cord and brainstem nuclei of mice. In addition, CT-1 enhances transcription factor NF kappa B DNA-binding activities and activates phosphatidylinositol 3-kinase (PI-3 kinase) in cardiac myocytes. Studies have revealed CT-1 is highly expressed in the heart, prostate, skeletal muscle, and ovary, and expressed at the lower levels in lung, kidney, pancreas, thymus, small intestine, and testis. CT-1 is highly secreted by myotubes, and promotes the survival of cultured embryonic mouse and rat MNs. CT-1 is associated with pathophysiology of heart diseases, like hypertension, myocardial infarction, valvular heart disease, and congestive heart failure.

Applications

Table Summary of antibody applications and working conditions

Options Functions	YES	NO	Not determined	Recommended Work dilution or concentration
ELISA	*			1:80000(at least detecting 12.5ng/ml)
Western Blotting	*			1:1000-5000(at least)
Enzyme Immunoassay(EIA)			#	

Note: Other applications are not tested yet. Optimal dilutions should be determined by each laboratory for each application

**The products are furnished for LABORATORY RESEARCH USE ONLY.
Not for diagnostic or therapeutic use.**

Preparation

Immunogen was expressing Human CT-1 protein. This antibody was produced from a rabbit immunized with the immunogen. The IgG fraction was purified from rabbit serum followed by Protein A/G affinity chromatography.

Specificity

Rabbit anti-Human Cardiotrophin-1 antibody detects specifically target derived from human recombinant protein as well as HepG2 cell lysates. Cross reactivity with mouse and rat CT-1 was not tested yet.

Reconstitution

Supplied as lyophilized and purified antibody originally containing PBS, without **Preservative Stabilizers**, liking Sodium Azide. *It final concentration is indicated in shipping vial.* **Please avoid freeze-thaw cycles.**

The antibody is stable for at least years from the data of receipt when stored at -20°C to -70°C. Reconstituted antibody (suggesting with sterile PBS) can also be aliquotted and stored frozen at -20°C to -70°C in a manual defrost freezer for months without detectable loss activity. Upon reconstitution, the antibody can be stored at 4°C for 1 month.

Storage

Store at -20°C, if not intended for use within a month, keep it at 4°C and minimize freezing and thawing when use.
