# Certificate of Analysis and Data Sheet <br> Recombinant Human Hepatocyte Growth Factor B Chain 

Catalog No.<br>228-10706

## Source

E.Coli

## Synonyms

Scatter Factor, SF, Hepatopoietin, HPTA, HGF, HGFB, F-TCF, DFNB39, Hepatocyte growth factor, Hepatocyte growth factor beta chain.

## Introduction:

Hepatocyte Growth Factor (HGF) is a multifunctional growth factor which regulates both cell growth and cell motility. It exerts a strong mitogenic effect on hepatocytes and primary epithelial cells. HGF synergizes with Interleukin-3 and GM-CSF to stimulate colony formation of hematopoietic progenitor cells in vitro and may, therefore, also modulate hematopoiesis. HGF is secreted as a single inactive polypeptide which is cleaved by serine proteases into a 69 kDa Alpha chain and 34 kDa Beta chain. A disulfide bond linking the alpha and beta chains produces the active heterodimeric molecule.

## Description

HGF-B Human Recombinant produced in E.Coli is a single, non-glycosylated, Polypeptide chain containing 234 amino acids fragment (495-728) having a molecular weight of 34 kDa and fused with a 4.5 kDa amino-terminal hexahistidine tag.

The HGF-B is purified by proprietary chromatographic techniques.

## Physical Appearance

Sterile Filtered clear solution.

## Formulation

HGF-B protein is supplied in 1xPBS, $50 \%$ glycerol.

## Stability

Store at $4^{\circ} \mathrm{C}$ if entire vial will be used within 2-4 weeks.
Store, frozen at $-20^{\circ} \mathrm{C}$ for longer periods of time.
Please avoid freeze thaw cycles.

## Purity

Greater than $95.0 \%$ as determined by SDS-PAGE.
