## Recombinant Human VEGF-B

CATALOG \#: | $4642-20$ | $20 \mu g$ |  |
| :--- | :--- | ---: |
|  | $4642-100$ | $100 \mu g$ |
|  | $4642-1000$ | 1 mg |

LOT \#:

SOURCE:
E. coli

PURITY: $\quad>98 \%$ by SDS-PAGE analyses
Endotoxin level is $<0.1 \mathrm{ng}$ per $\mu \mathrm{g}$ of VEGF-B

MOL. WEIGHT:
9.63 kDa

FORM:
Lyophilized without additives

## RECONSTITUTION:

Centrifuge the vial prior to opening. Reconstitute in $0.1 \%$ acetic acid to a concentration of 0.1-1.0 $\mathrm{mg} / \mathrm{ml}$. The solution should be stored at $-70^{\circ} \mathrm{C}$.

## STORAGE CONDITIONS:

The lyophilized VEGF-C is best-stored at $-20^{\circ} \mathrm{C}$. Reconstituted VEGF-C should be stored in working aliquots at $-70^{\circ} \mathrm{C}$.

## DESCRIPTION:

VEGF-B, a member of the VEGF family, is a potent growth and angiogenic cytokine. It promotes DNA synthesis in endothelial cells, regulates angiogenesis and vascular permeability, and inhibits apoptosis in certain smooth muscle cells and neurons. VEGF-B is expressed in all tissues except the liver. It forms cell surfaced-associated disulfide linked homodimers and can form heterodimers with VEGF-A. There are two known isoforms, formed by alternative splicing, which have been designated VEGF-B167 and VEGF-B186. Both forms have identical amino-terminal sequences encoding a "cysteine knot" like structural motif, but differ in their carboxyl-terminal domains. Both VEGF-B isoforms signal only through the VEGFR1 receptor. Recombinant human VEGF-B is a 38.0 kDa disulfide-linked homodimeric protein consisting of two 167 amino acid polypeptide chains.

## BIOLOGICAL ACTIVITY:

Per researcher's feedback, the protein is biologically active as determined by the dose-dependent stimulation of the proliferation of human umbilical vein endothelial cells (HUVEC) in the presence of human $\mathrm{VEGF}_{165}$. The expected $\mathrm{ED}_{50}$ for this effect is $0.5-5.0 \mu \mathrm{~g} / \mathrm{ml}$.

FOR RESEARCH USE ONLY! Not to be used on humans.
