

# CAG^CTG AccuCut<sup>™</sup> Restriction Endonuclease

• Cat. No. E-1961 1500 Units E-1962 7500 Units

Lot No.: 980910

Supplied with Enzyme

10X AccuCut™Orange Buffer : 1 mL 100 mM pH 7.6 Tris-HCI 100 mM MaCl<sub>2</sub> 500 mM NaCl 10 mM DTT 1X Dilution Buffer : 1 mL 10 mM pH 7.6 Tris-HCI 50 mM KCI  $0.1 \, \text{mM}$ **FDTA** 1 mM DTT  $200 \mu \text{ g/mL}$ Acetylated BSA 50% Glycerol

- Store at -20 ℃.
- Unit definition : One unit of restriction endonuclease activity is defined as the amount of enzyme required to completely digest 1µg of substrate DNA in a total reaction volume of 50 µL in one hour using the AccuCut™ buffer provided. Incubations are performed in 1.5 mL tubes at the appropriate incubation temperature as indicated in the Product Profile.

• Isoschizomer : None

- Neoschizomer :Unfound
- Reactivity on methylated substrate DNA: Blocked by m5CAGCTG/CAGm5CTG/CAGm4C T G

· Concentration: 20 Units/uL

- Reaction Condition
  - 10X AccuCut™ Orange Buffer Buffer
  - Incubate at 37 °C .

### Storage Buffer

 20 mM
 pH 7.5, Tris-HCI

 50 mM
 KCI

 1 mM
 EDTA

 10 mM
 2-mercaptoethanol

 50%
 Glycerol

Heat inactivation: No.

## **Quality Control**

#### · Overdigestion Assay :

No nonspecific activity was detected after incubation of 1  $\mu$ g of  $\lambda$  DNA with 50 units of Pvu II for 15 hours.

- \* Conditions of low ionic strength, high enzyme concentration, glycerol concentration >5%, or pH >8.0 may result in star activity.
- · Nuclease Contamination Assay :

No altered pattern was detected after incubation of 1  $\mu g$  of substrate DNA with Pvu II in 50  $\mu L$  reaction volume with the supplied AccuCut<sup>™</sup> buffer overnight.

## · Ligation and Recutting Assay:

This assay is used to test for exonuclease activity that would degrade the termini of restriction fragments, resulting in inhibition of ligation and of subsequent digestion of ligated fragments. After 40-fold overdigestion with *Pvu* II, 95% of the DNA fragments can be ligated and recut with *Pvu* II.
