MONOCLONAL ANTIBODY

## Anti-Thioredoxin 2 (4C5)

**Background :** Thioredoxins (Trx) are small, multi-functional proteins with oxidoreductase activity and are ubiquitous in essentially all living cells. Trx contains a redox-active disulfide/ dithiol group within the conserved Cys-Gly-Pro-Cys active site. The two cysteine residues in the conserved active centers can be oxidized to form intramolecular disulfide bonds (1). Reduction of the active site disulfide in oxidized Trx is catalyzed by Trx reductase with NADPH as the electron donor. The reduced Trx is a hydrogen donor for ribonucleotide reductase, the essential enzyme for DNA synthesis, and a potent general protein disulfide reductase with numerous functions in growth and redox regulations (2). Specific protein disulfide targets for reduction by Trx include protein disulfide-isomerase (PDI) (3) and a number of transcription factors such as p53 (4), NF- $\kappa$ B (5) and AP-1 (T1-151). Trx is also capable of removing  $H_2O_2$ , particularly when it is coupled with either methionine sulfoxide reductase or several isoforms of peroxiredoxins (6-7).

**Immunogen :** Recombinant human protein purified from *E.coli*

**Host :** Mouse

**Clone number :** 4C5

**Isotype :** IgG2b, k

**Size :** 100ul

**Composition :** PBS containing 50% glycerol

**Positive control :** 293T cell lysates

**Storage :** Store for 1 year at  $-20^{\circ}C$  from date of shipment

### Species cross reactivity

Human	Mouse	Rat
+	+	+

### Applications :

Immunoprecipitation (2ul/400ul lysates)
