## bs-0431R-FITC

## - Rabbit Anti-OPG Polyclonal Antibody, FITC conjugated

Conjugated Primary Antibodies

## Background:

Osteoprotegerin (OPG, or osteoclastogenesis inhibitory factor) is a secretory glycoprotein belonging to TNF receptor superfamily. Acts as decoy receptor for RANKL and thereby neutralizes its function in osteoclastogenesis. Inhibits the activation of osteoclasts and promotes osteoclast apoptosis. Bone homeostasis seems to depend on the local RANKL/OPG ratio. May also play a role in preventing arterial calcification. May act as decoy receptor for TRAIL and protect against apoptosis. TRAIL binding blocks the inhibition of osteoclastogenesis. OPG acts as a soluble factor in the regulation of bone mass and may be beneficial in the treatment of osteoporosis with increased osteoclast activity. OPG consists of 401 amino acids with a molecular weight of 44 kDa as a monomer and 90 kDa as a disulphide-linked dimer.

Purification: Was purified by Protein A and peptide affinity chromatography.

## Storage:

Aqueous buffered solution containing $100 \mathrm{ug} / \mathrm{ml}$ BSA, $50 \%$ glycerol and less than $0.09 \%$ sodium azide. Store at $20^{\circ} \mathrm{C}$ for 12 months. Protect from light. [Product without BSA and/or sodium azide is available for special order.]

## Reconstitution:

If the antibody is in liquid form, no reconstitution needed.

Reconstitution is only required for the lyophilized antibody. Please refer to the reconstitution instruction card in the package.

Size: 100ul

Concentration: lug/uL
Host: Rabbit
Reactivities:
Human,Mouse,Rat,Dog,Bovine,

## Application:

- IF(1:100-500)
- Not yet tested in other applications. Optimal working dilutions must be determined by the end user.

## Antibody Type: Polyclonal <br> Isotype: IgG <br> Molecular Weight: 44kDa

## Note:

For research use only. CAUTION: Not for human or animal therapeutic or diagnostic use.
