

bs-1124R-A647

• Rabbit Anti-5-HTR1A/HTR1A Polyclonal Antibody, Alexa Fluor 647 conjugated

Conjugated Primary Antibodies

Background:

5-HT receptors are receptors for the neurotransmitter and peripheral signal mediator 5-hydroxytryptamine (5-HT), also known as serotonin. 5-HT receptors are of great interest as they also mediate the effects of a broad range of pharmaceutical and hallucinogenic drugs. Like most other members of this family, the 5HT1A receptor (also referred to as 5HT receptor 1A or serotonin receptor 1A) is a G-protein coupled receptor. It acts by decreasing cellular levels of cAMP and causes neuronal inhibition. In mammals, 5HT1A receptor expression is strongest in CNS limbic pathways that control emotion, and 5HT1A receptor function is associated with a number of behavioural effects (sleep, feeding, thermoregulation, aggression and anxiety). Agonists for the 5HT1A receptor include LSD, buspirone, and psilocin.

Purification: Was purified by Protein A and peptide affinity chromatography.

Storage:

Prepared as lyophilized powder or liquid and shipped on ice. Store at -20°C for one year. Protect from light.

Reconstitution:

If the antibody is in liquid form, no reconstitution needed.

Reconstitution is only required for the lyophilized antibody. Please refer to the reconstitution instruction card in the package.

For full size images and description please click [HERE](#).

Size: 100ul or 100ug lyophilized

Concentration: 1ug/uL

Host: Rabbit

Reactivities:

Human, Mouse, Rat, Dog, Horse, Rabbit,

Application:

- IF(1:100-500)
- Not yet tested in other applications. Optimal working dilutions must be determined by the end user.

Antibody Type: Polyclonal

Isotype: IgG

Molecular Weight: 46kDa

Preservatives:

10ug/uL BSA and 0.1% NaN₃.

For research use only. CAUTION: Not for human or animal therapeutic or diagnostic use.
