

bs-1371R-PE

• Rabbit Anti-Snail/SNAI 1 Polyclonal Antibody, PE conjugated

Conjugated Primary Antibodies

Background:

The zinc finger transcription factor 'SNAIL' was first identified in *Drosophila* and, along with 'twist', a basic helix-loop-helix transcription factor, is indispensable for mesoderm formation. SNAIL is a repressor of mouse E-cadherin transcription, with expression of SNAIL inversely correlated with expression of E-cadherin. Abnormal expression of SNAIL could underlie the tumorigenic conversion of epithelia associated with loss of E-cadherin expression through screening mouse and human cell lines and by in situ hybridization of primary human tumors undergoing malignant progression.

Purification: Was purified by Protein A and peptide affinity chromatography.

Storage:

Prepared as lyophilized powder or liquid and shipped on ice. Store at -20°C for one year. Protect from light.

Reconstitution:

If the antibody is in liquid form, no reconstitution needed.

Reconstitution is only required for the lyophilized antibody. Please refer to the reconstitution instruction card in the package.

For full size images and description please click [HERE](#).

Size: 100ul or 100ug lyophilized

Concentration: 1ug/uL

Host: Rabbit

Reactivities: Human, Mouse, Rat,

Application:

- IF (1:100-500)
- Not yet tested in other applications. Optimal working dilutions must be determined by the end user.

Antibody Type: Polyclonal

Isotype: IgG

Molecular Weight: 29kDa

Preservatives:

10ug/uL BSA and 0.1% NaN₃.

For research use only. CAUTION: Not for human or animal therapeutic or diagnostic use.
