

Comb, 50 Tooth, 1.5mm Thick **Cat #: 33-612C50W**

23 x 14cm Gel Box Accessory
1 Comb/Unit
Multichannel compatible

Gel electrophoresis combs are built to a high standard of quality and durability. These combs casts multichannel pipettor compatible wells. The teeth in these combs are spaced at 9mm center-to-center so that the wells formed will be compatible with 8 or 12-channel pipettors. These combs will allow sampling loading into each well. The teeth are precision machined from tough acrylic and the spine is made from thick PTFE to offer better heat resistance. While the recommendation is to allow the freshly dissolved agarose to cool, these combs and gel trays will withstand abuses that will damage inferior injection molded equipment. Every comb is labeled with the number of teeth and tooth thickness - avoid counting teeth to find the right comb! A complete line of gel box accessories is available.
