Bgl II

A^GATCT AccuCut™ Restriction Endonuclease

• Cat. No. E-1241 1000 Units E-1242 5000 Units

Lot No.: 02C151491H8A3

Supplied with Enzyme

10X AccuCut™Red Buffer : 1 mL 500 mM pH 7.6 Tris-HCI 100 mM MqCl₂ 1 M NaCl 10 mM DTT 1X Dilution Buffer : 1 mL 10 mM pH 7.6 Tris-HCI 50 mM KCI 0.1 mM EDTA 1 mM DTT $200 \mu \text{ g/mL}$ Acetylated BSA 50% Glycerol

- Store at -20 ℃.
- Unit definition : One unit of restriction endonuclease activity is defined as the amount of enzyme required to completely digest $1\mu g$ of substrate DNA in a total reaction volume of $50~\mu L$ in one hour using the AccuCut TM buffer provided. Incubations are performed in 1.5~mL tubes at the appropriate incubation temperature as indicated in the Product Profile.
- Isoschizomer: Ncr I, NspMAC I,Pae2k I,Pae18k I.
- Neoschizomer :Unfound

· Reactivity on methylated substrate DNA:

Not blocked by GC ^{m5}CN₅GGC^b Blocked by G ^{m5}CCN₅GGC. GCCN₅GG ^{m5}C GC ^{m4}CN₅GGC.

• Source : Bacillus globigii.

• Concentration : 30 Units/µL

Reaction Condition

- 10X AccuCut™ Red Buffer
- Incubate at 37 ℃.

Storage Buffer

20 mM pH 7.5, Tris-HCl 50 mM KCl 1 mM EDTA

10 mM 2-mercaptoethanol 50% Glycerol

• Heat inactivation : No.

Quality Control

Overdigestion Assay :

No nonspecific activity was detected after incubation of 1 μ g of λ DNA with 50 units of *Bgl* II for 15 hours.

* Conditions of low ionic strength, high enzyme concentration, glycerol concentration >5%, or pH >8.0 may result in star activity.

Nuclease Contamination Assay :

No altered pattern was detected after incubation of 1 μg of substrate DNA with BgI II in 50 μL reaction volume with the supplied AccuCutTM buffer overnight.

· Ligation and Recutting Assay:

This assay is used to test for exonuclease activity that would degrade the termini of restriction fragments, resulting in inhibition of ligation and of subsequent digestion of ligated fragments. After 40-fold overdigestion with *BgI* II, 95% of the DNA fragments can be ligated and recut with *BgI* II.
