Quality Control

· Overdigestion Assay:

No nonspecific activity was detected after incubation of 1 μ g of λ DNA with 50 units of *Bst*2U I for 15 hours.

- * Conditions of low ionic strength, high enzyme concentration, glycerol concentration >5%, or pH >8.0 may result in star activity.
- · Nuclease Contamination Assay :

No altered pattern was detected after incubation of 1 μg of substrate DNA with *Bst*2U I in 50 μL reaction volume with the supplied AccuCut[™] buffer overnight.

· Ligation and Recutting Assay:

This assay is used to test for exonuclease activity that would degrade the termini of restriction fragments, resulting in inhibition of ligation and of subsequent digestion of ligated fragments. After 40-fold overdigestion with Bst2U I, 95% of the DNA fragments can be ligated and recut with Bst2U I.
